

“First mission to ‘touch’ the sun catches the solar wind| CNN”

A solar mission that has been spiraling closer to the sun to unravel its secrets has flown near enough to our star's surface to make a key discovery.

Data from the Parker Solar Probe has uncovered the source of solar wind, a stream of energized particles that flow from the corona, or the sun's hot outer atmosphere, toward Earth.

One of the key motivations behind the mission, named for

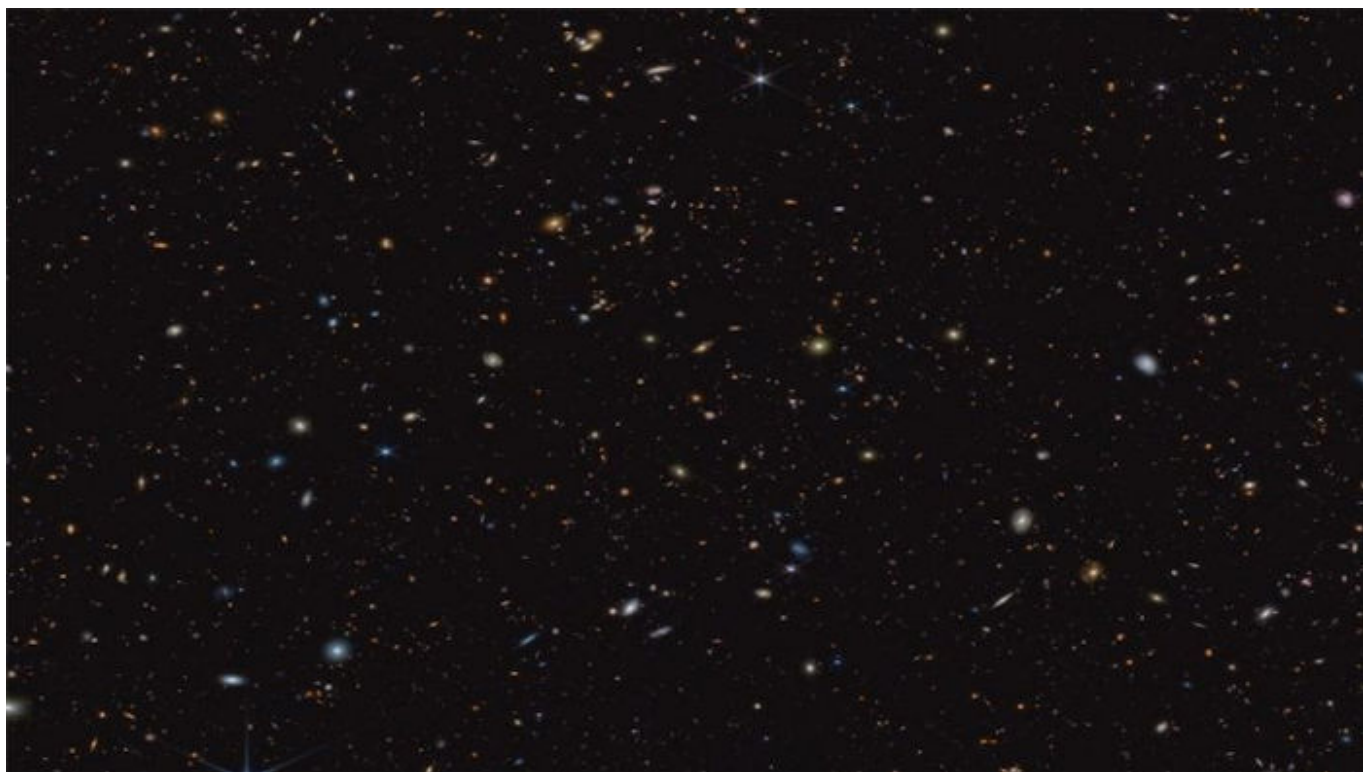

the [late astrophysicist Eugene Parker](#) and [launched in 2018](#), was to determine what the wind looks like as it forms near the sun and how it escapes the star's gravity.

As the probe came within about 13 million miles (20.9 million kilometers) of the sun, its instruments detected fine structures of the solar wind where it generates near the photosphere, or the solar surface, and captured ephemeral details that disappear once the wind is blasted from the corona.

“Glimpse 45,000 baby galaxies in the early universe”

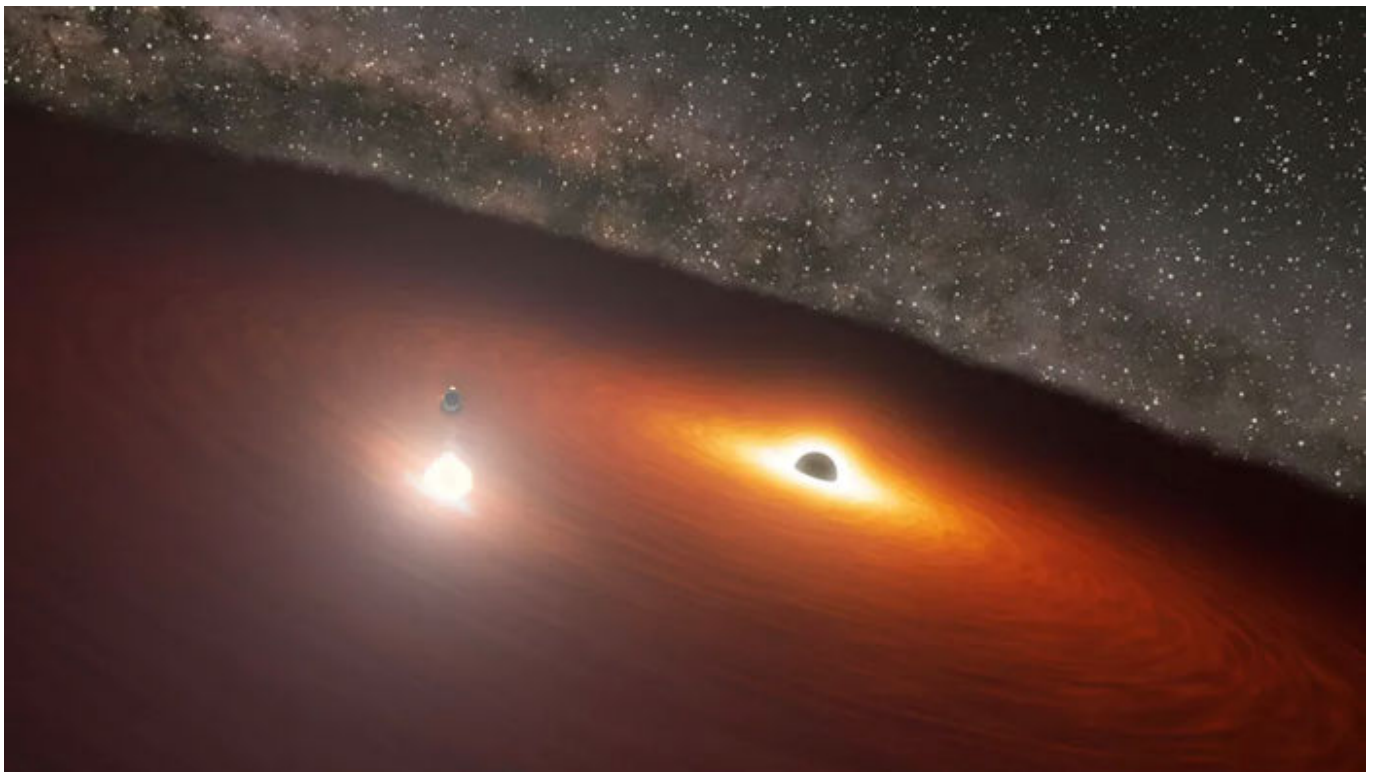

On June 5, 2023, NASA [released](#) a new composite image from the James Webb Space Telescope ([JWST](#)). It shows our universe when it was less than 600 million years old. And, you can explore *more than 45,000 baby galaxies* in this image, especially if you [zoom into the large interactive image](#).

Our universe is thought to be more than 13 billion years old. So – at 600 million years – the cosmos was in its infancy. The galaxies had just formed from the expanding cloud of most hydrogen gas, moving outward from the [Big Bang](#).

**“Brilliant gamma-ray flare
100 times brighter than our
entire galaxy reveals 1
monster black hole is
actually 2”**

Astronomers have confirmed the presence of a second supermassive black hole in the turbulent heart of a distant galaxy.

The scientists also found that both of these cosmic monsters are feeding on gas and dust and that one has a peculiar oblong orbit that sends it plunging through a massive disk of red-hot dust and gas around its companion.

Services for the Week of October 7, 2023

Saturday, October 7, 2023
10:00 AM COMMUNION
Chapel of The Holy Child

RRF Gene Savoy, Jr.
Lector: Rev. Bruce Kanzelmeyer
Cantor: Rev. Mary Foust
Reader: Rev. Gary Huss, Jr.

Sunday, October 8, 2023
SUNRISE DIVINE SERVICE
Cathedral of the Americas

Leave: 6:00

Gate: 6:40

Sunrise: 7:08

RRF Gene Savoy, Jr.

Concelebrants:

RF Robert Petrovich

Rev. Bruce Kanzelmeyer

Assistant: RM Barbara Whitney

OPEN-AIR COMMUNION

Church of the End Times *Rev. Mary Foust*

Church of the Christian Churches *RC Peter Foust*

Wednesday, October 11, 2023

12:00 NOON COMMUNION

**Follow the Brightness of God
Back to Our Origin**

“Out of our highest feeling, the brightness of God shines into us, which teaches us Truth, and moves us toward every virtue and in eternal love towards God. If we follow this Brightness without pause, back into that Source from whence it came forth, there we feel nothing but a quenching of our spirit and an irretrievable sinking into simple and fathomless Love. Could we continue to dwell there with our simple gaze, we should always so feel it; for our immersion and transformation in God continues without ceasing in eternity, if we have gone forth from ourselves, and God is ours in the immersion of Love. If we possess God in the immersion of Love—that is, if we are lost to ourselves—God is our own, and we are His. This immersion is essential and is closely bound up with the state of Love: and so it continues whether we sleep or whether we wake, whether we know it or whether we know it not. ... And this down-sinking is like a river, which without pause or turning back ever pours into

the sea, which is its proper resting place. So likewise when we possess God alone.” ~[John of Ruysbroeck](#)

God's Brightness Shines in Us

When we seek the Light of God, his brightness will shine in us. As Ruysbroeck says, that brightness will bring us Truth and Knowledge. Not the kind of knowledge we get from books or college classes, but the Divine Knowledge that the Gnostics called Gnosis.

Follow the Brightness

Just seeking God's Brightness (or Light) isn't enough. We must seek it always, every day, and go deeper and deeper into it with time and practice. As we do, using the techniques taught in Cosolargy, we gradually increase our level of consciousness until we reach the highest level, which is God. When we reach that level, we become one with God, one with Love, one with All. We are then a true child of the universe, but the immortal spiritual universe, not the mortal one of matter.

Sinking Into Love

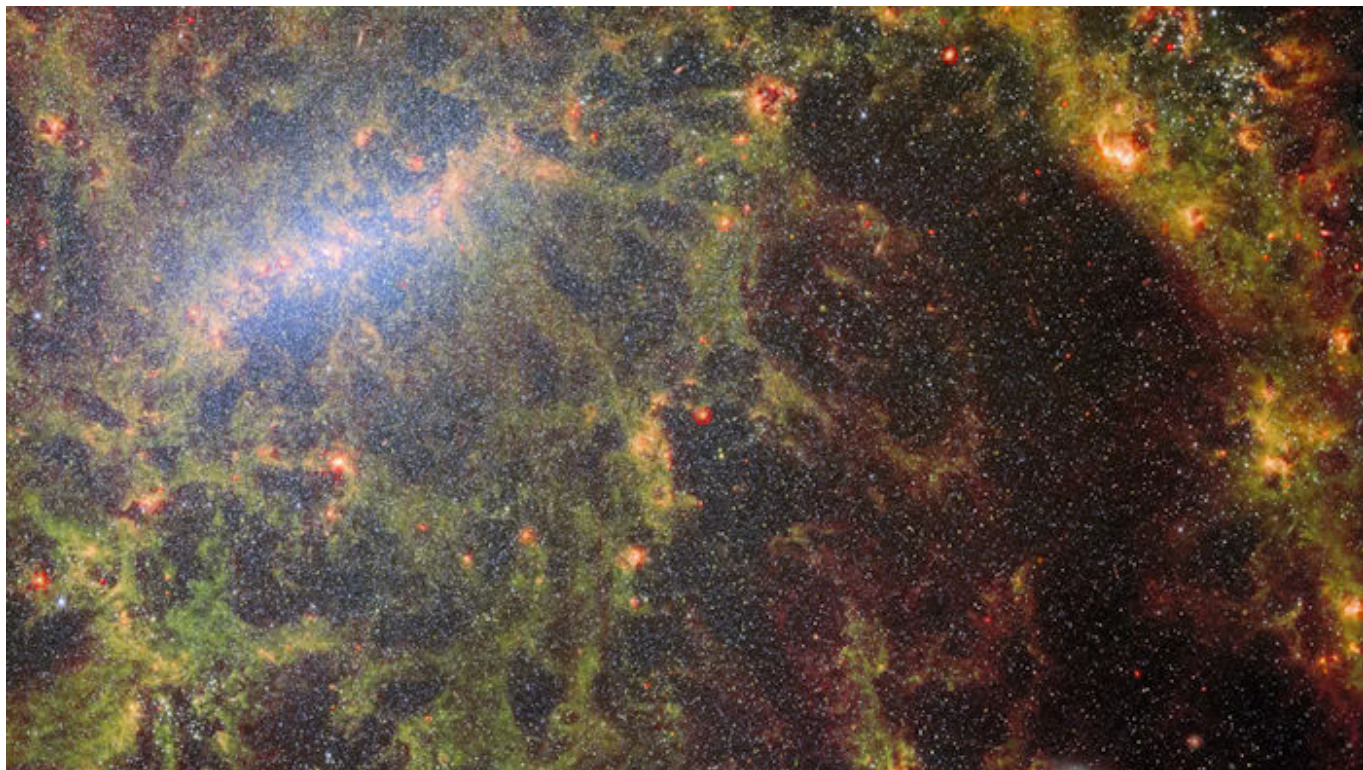

I would not have chosen to call it “sinking into love,” but the idea is correct. When we enter the brightness of God's Light, we experience the feeling of universal Love. This is not a love for an individual or for humans only. Universal Love is for all beings. It is an all-consuming Love. People who have had a Near Death Experience (NDE) often mention briefly experiencing this and it usually leaves them permanently changed. They can no longer see other beings as slaves or tools of man but as spirits in a physical form that just happens to be different from our own physical form.

Immersion in God

Ruysbroeck says that total immersion in God is essential, and he is correct. To become one with God, we must become immersed

in God, immersed in His Light. Ruysbroeck's comparison of this process to a river that forever flows into the sea is an apt one. That is how we must connect with God. Of course, it will start with connecting briefly and temporarily, but advance over time until it is a permanent connection. Of course, rivers and seas are not truly eternal, yet the comparison makes the point well. So practice techniques as taught and soon you too will be connecting with the Brightness of God's Light, even if you are not consciously aware that it has happened.

“Webb telescope captures galaxy 20 million light-years away | CNN”

The James Webb Space Telescope set its sights on a galaxy 20 million [light-years](#) away, capturing a dazzling star-forming galaxy in images streaked with the signature of passing asteroids.

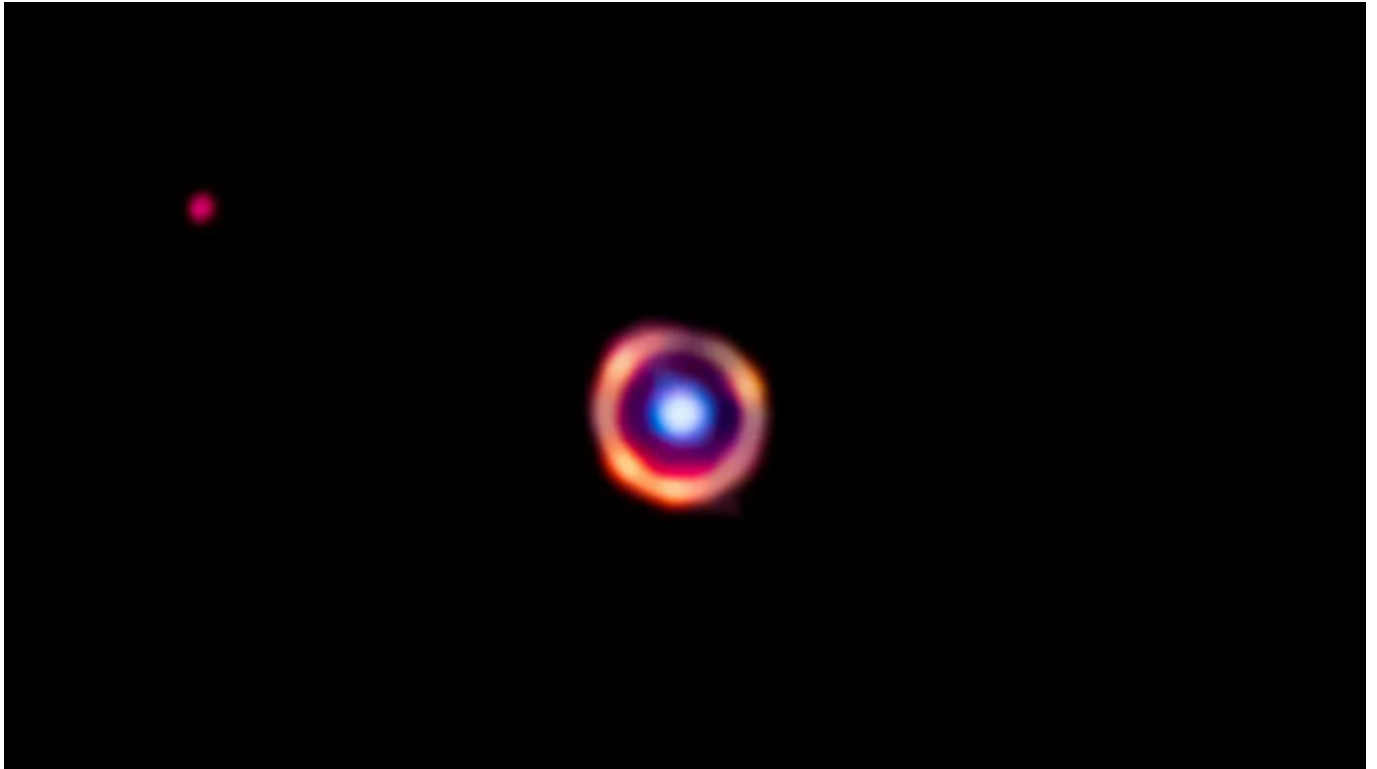

A bright band in the upper left corner of the images shows the bright, bar-shaped center of the galaxy, according to a NASA [news release](#).

The NGC 5068 galaxy is a barred spiral galaxy, the same type as our home Milky

“Webb telescope detects organic molecules in distant galaxy | CNN”

Astronomers have detected the most distant known organic molecules in the universe using the James Webb Space Telescope. It's the first time Webb has detected complex molecules in the distant universe.

The complex molecules were found in a galaxy known as SPT0418-47, located more than 12 billion [light-years](#) away.

The discovery sheds light on the chemical interactions that occurred within the earliest galaxies in the universe and how they relate to star formation.
