

“Astronomers detect water molecules swirling around a star | CNN”

A nearby star system is helping astronomers unravel the mystery of how water appeared in our solar system billions of years ago.

Scientists observed a young star, called V883 Orionis, located 1,300 light-years away using the Atacama Large Millimeter/submillimeter Array of telescopes, or ALMA, in northern Chile.

The star is surrounded by a planet-forming disk of clouds of gas and dust leftover from when the star was born. Eventually, material in the disk comes together to form comets, asteroids and planets over millions of years.

“Hidden galaxies revealed in the first images of the ‘cosmic web’”

You might not have heard of them if you aren't an astronomer, but the largest known objects in the universe aren't galaxies or the super-clusters they form together. They're actually ghostly webs of dark matter that form the boundary between the voids of deep space and the clusters of galaxies where stars shine, planets form, and most of the astronomical phenomena you know reside.

This filament, which spreads throughout the cosmos forming a foam-like structure, attracts dust along its main stretches while galaxies seem to cluster at its nodes. Despite the massive size of these filaments—a typical length would be in the 200-500 million light-year range—it isn't easy to actually see these things directly.

**“Photos released by NASA show
once-invisible spiral
galaxies and a first look at
star formation”**

Researchers at NASA used infrared

wavelengths to take three photos of galaxies, “getting their first look at star formation, gas, and dust in nearby galaxies with unprecedented resolution.”

**Services for the Week of May
20, 2023**

Saturday, May 20, 2023

10:00 AM COMMUNION

Chapel of The Holy Child

RRF Gene Savoy Jr.

Lector: RC Peter Foust

Cantor: Dea. Shane Grady

Reader: Olimpia Huss

Sunday, May 21, 2023

SUNRISE DIVINE SERVICE

New Pentecost Church

Leave: 4:30

Gate: 5:20

Sunrise: 5:45

RRF Gene Savoy Jr.

Concelebrants:

RF Robert Petrovich

Rev. Bruce Kanzelmeyer
Assistant: Rev. Barbara Whitney

Noah Huss Receives Rite of Confirmation and Investiture as Acolyte

Noah enters the Chapel

Noah Receives the Rite of Confirmation and Investiture from Bishop Gene Savoy, Jr.

On May 13, 2023 the Rite of Confirmation and Investiture as Acolyte were held in the Chapel of the Holy Child for Noah Huss, the son of Olivia and Gary Huss, Jr.

During the ceremony, Noah was invested with a white alb and blue cincture and received a Solar Cross pendant from his parents. Present at the ceremony in addition to the parents were Noah's Godparents, Claudia Grady and Shane Grady.

Following the ceremony, Noah was presented to the Congregation for acceptance prior to the service of Communion of Fellowship. His presentation indicates that he is ready to undertake liturgical training in the Minor Order of Acolytes in preparation for Emancipation at age fifteen when he can formally begin studies in The Academy.

Noah Huss with his parents, Godparents, and Bishop Savoy

Noah was received joyfully into the Congregation, and the Congregation was invited to attend a reception in the vestibule in his honor following Communion of Fellowship.

Noah joins the other Acolytes (Joseph Roy and Helena Savoy) in the bell choir.

The Pleasured Light of God

“Songs of Thomas Song –My Father Evoked Holy Fire. My father the pleased light, the pleased light, the glory, my father the pleased light, the pleasure, the holy light, my father the pleased light, the pleasure, the esteemed light. He summoned the aeons of light, he chose them to enjoy his greatness. He summoned the aeons of peace in whom no flaw or loss lives. He summoned the aeons of light and his sons in whom he put the aeons. He summoned the aeons of peace. He called his wealth, set it in them. He summoned the aeons to repose. He called his angels, set it in them. He founded places for life. He set living icons in them. He set living icons in them, which never disappear. He summoned clouds of brightness, dripping with dew and light. He evoked holy fire that burned sweet. He evoked wind and air that breathed a living breath. He evoked holy mountains pouring out fragrant roots. They are all concord and melody. In them is no flaw or

loss of lives. They were ecstatic in brightness filled and inhabiting eternity."

"A son of light looked down from high and saw him. He said to rich brethren, O my brethren, sons of light in whom no flaw or loss lives, I looked down into the abyss. I saw the evil one, the son of evil. I saw the evil one, the son of evil, who wanted to get into war. I saw his seven companions too and his twelve helpers. I saw their tent pitched and a roaring fire in it." ~The Coptic Manichaean Songbook

The Pleasured Light

God is the pleasured Light because God's Light is pleasing, even though it is very bright. God is all about Light, and when He created, He started with the words, "Let there be Light". Of course, there is more than one kind of light, and while all light does good, Spiritual Light is better than physical Light because it awakens and nourishes the soul.

Aeons of Light

Just as there are aeons within the physical realm, there are aeons in the spiritual world of Light. As we in Cosolargy know, we are now at the end of the fifth aeon and the beginning of the sixth. The sixth aeon will return us to the spiritual beings we were always meant to be.

The song also says that God also summoned aeons of peace in which His wealth was set. This also refers to the spiritual realm, which is always at peace within itself. In the realm of Spirit, there is no war, no death, no disease, no greed, and none of the negative things that are found in the physical realm.

A Son of Light

The song says that a Son of Light looked down and saw him. In this case, him probably means Mani, the founder of Manichism.

This statement tells us that there is more than one Son of Light, or it wouldn't say "**a** son of Light." There are indeed many sons and daughters of Light in Heaven, but if this one is looking down toward Mani, then he is also seeing them on Earth. There are sons and daughters of Light on Earth, but they are, for the time being, fallen from the Light. It is up to us to try to return to that Light. When we do try, we are aided by God and the Angels of Light.

I saw the Evil One

Of course, when you look "down" at the physical realm, you will see the evil one, the Devil and the demons of darkness that rule the physical domain. Their evil ways are limited to some degree by God, but they exercise them nonetheless. Their tent with fire in it is a reference to hell. Although the idea of Hell as eternally burning souls is outdated, it is probably how most people thought of it in the time of Mani. In any case, I think this short song, the last paragraph in the quote, was sung as a warning to those who embraced the realm of matter and turned away from the Light of God.

"RECORD BROKEN: Hubble Space Telescope Captures Stunning Image Of 'A Star At The Edge Of Space-Time'"

After a week of anticipation, NASA has finally released a historic Hubble Space Telescope image – and it is really stunning.

To summarise, the photograph seems to show the farthest distant star ever discovered by humans. According to the scientists behind the finding, this not only breaks a record but also gives valuable information into the early universe and sets up a “major confirmation” for the ultrapowerful new James Webb Space Telescope.

“We almost didn’t believe it at first, it was so much farther than the previous most-distant, highest redshift star,” said astronomer Brian Welch of the Johns Hopkins University in Baltimore, the lead researcher behind the new image, in a blurb about the finding.

“ ‘Runaway’ black hole the size of 20 million suns found speeding through space with a trail of newborn stars behind it”

Astronomers have spotted a runaway supermassive black hole, seemingly ejected from its home galaxy and racing through space with a chain of stars trailing in its wake.

According to the team's research, which was published on the pre-print server [arXiv.org](https://arxiv.org)(opens in new tab) and has been accepted for publication in The Astrophysical Journal Letters, the discovery offers the first observational evidence that

supermassive black holes can be ejected from their home galaxies to roam interstellar space.
