

“The Answer is Written in the Stars”

Here's a question that sounds simple but has kept cosmologists arguing for decades – how old is the universe? You'd think we'd have nailed this down by now. We've sent spacecraft to the edges of the Solar System, photographed galaxies billions of light years away, and detected ripples in the very fabric of spacetime itself. And yet, depending on which method you use to measure the universe's age, you get a different answer and those answers seem to contradict each other.

“Astronomers Produce the Largest Image Ever Taken of the Heart of the Milky Way”

Astronomers have used a collection of telescopes to peer through the gas and dust obscuring the center of the Milky Way to reveal the enigmatic Central Molecular Zone. This is a region 650 light-years in diameter filled with a complex network of filaments made of dense clouds of gas. A new image shows how cold molecular gas flows along these filaments to feed into clumps where new stars are born in the Milky Way's most extreme environment.

“Expanding catalog of black hole collisions is rewriting the history of the universe”

Between May 2023 and January 2024, a global network of gravitational-wave detectors picked up 128 new cosmic signals, more than doubling the entire catalog built across the previous decade. The universe, it turns out, is not quiet. It is constantly shaking.

People Deluded by Matter forget the Wisdom of the Spiritual Leaders of the Past

"They say among themselves, as it will ever be said when men are deluded by their mortality, The life of man is short and uncertain; the one certainty in life being the approach of death. What awaits hereafter, no man can tell, for no man is known to have returned from out of his tomb. We are all the children of accident and mischance, and in a short generation shall be as though we had never been. Our bodies shall harden and be ground to dust, and the fire of our hearts shall burn

itself out and turn to ashes. Our shade will hover for its day and then be wafted away on the wind, and as the waters come and go, our name will pass from the memories of men forever. The works of man shall pass away like the shadow of a cloud upon the sand, and his life will vanish like the dew of morning that disappears in the heat of the rising sun. What are the days of man, but the shadow of a shadow, and he passes away to an end from which there is no returning. He goes out through a door which is immediately shut, and there is no way back.

“They say, Come, therefore, and let us be joyful; let us cast aside the long face of learning and the melancholy face of discipline. Let us enjoy the good things of life, which are all about us. Let us take no thought for an uncertain future; where is the profit in that? Let us eat and drink to fullness, let us grant our bodies all means of satisfaction. Let no means of pleasure and enjoyment pass us by, but whatever comes our way, let us make the best of our lot in life. Let us turn our backs on all doctrines of the spirit, for they deny us much. Let us give full rein to all our senses and feelings, and let them serve the ends of pleasure.
...

“Such are the things spoken by men today, and if they declare them not openly, they hide them in their hearts. ... Gold is not gathered by the wayside.

“Yet, the wisdom of our fathers did avail them, whatever is said in the streets today. They have indeed left a memorial worthy of reverence, and they are not without shrines. ... As for the Enlightened Ones, who passed among the people and strengthened them since the days when the gods walked with men, their names have become lasting even though they themselves have gone.”

-The Kolbrin Bible (Man:34:7-10)

Life is Short

It is true that life is short and uncertain, but only if you consider just our physical life. Spiritual life is neither short nor uncertain, but those who choose to live only as material beings know nothing of that eternal life.

No Man can Tell What Awaits Hereafter

Again, this statement is true only if you are a materialist who knows nothing of your own spiritual Self. Those who have awakened and developed their spiritual Self know that a greater life awaits in the spiritual realm for those who prepare for it. But what many can't understand is that the materialist who does nothing to prepare for that eternal life will be denied it.

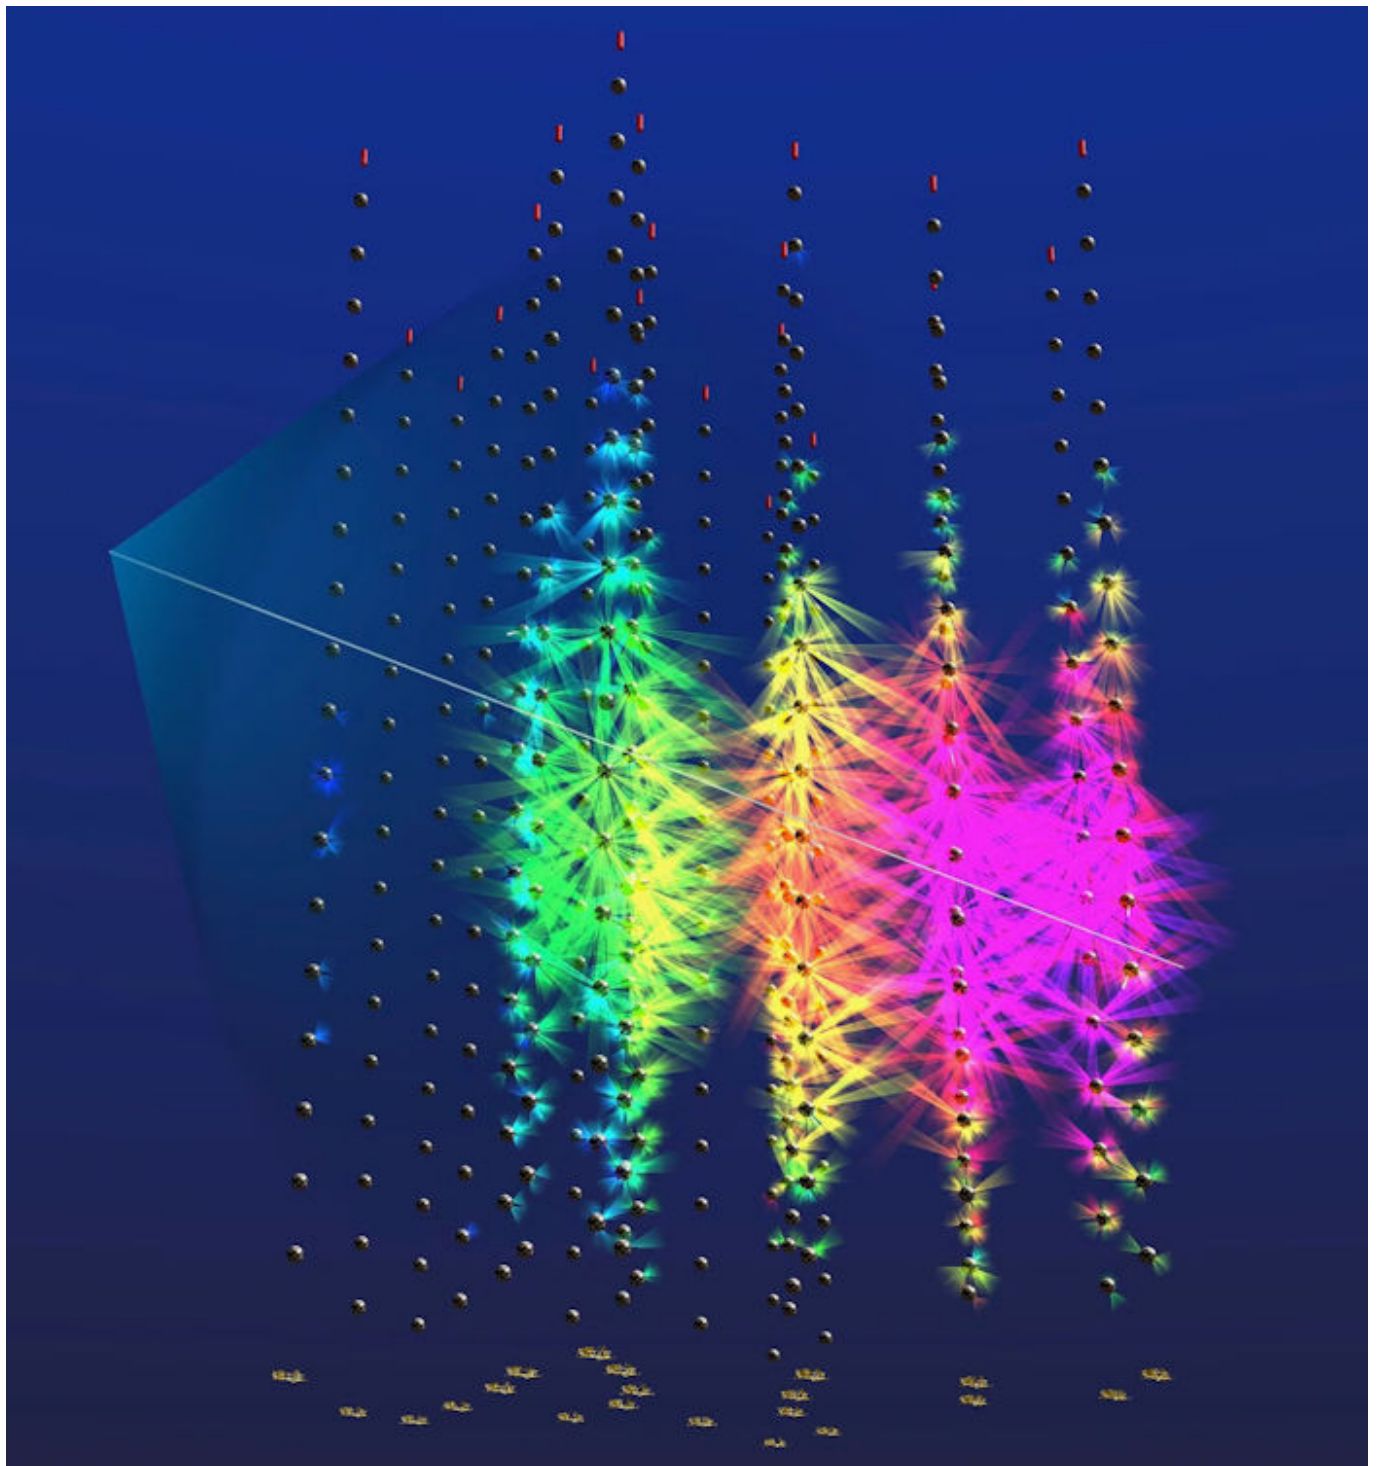

Works of Man Pass Away

That is true, but some people have learned to make things that last thousands of years. Some examples of that are the pyramids of Egypt and the roads built by the ancient Romans. Unfortunately, today, the philosophy of most companies is to build everything to be temporary. This has resulted in people who generally think the same way. They concern themselves with the temporary pleasures of matter and ignore the permanent ones of the Spirit.

Wisdom of our Fathers

Yes, the wisdom of the ancient spiritual leaders, as well as the few real ones of today (sadly, we have many today using spirituality as a way to scam people and make money), does live on in hidden schools and temples. More and more people are awakening to the truth, and the world is changing because of it.

**“Black hole-powered blazars
may explain the highest-
energy neutrino ever
detected”**

A single particle cut through the Mediterranean in February 2023 carrying an almost absurd amount of energy. Detected deep off the coast of Sicily by the KM3NeT/ARCA neutrino telescope, the neutrino clocked in at about 220 petaelectronvolts, making it the most energetic neutrino ever recorded.

“A surge of discoveries of gravitational waves”

Black holes are the densest objects in the universe. When they collide, they unleash *ripples in spacetime* known to scientists as gravitational waves. These waves travel across millions to billions of light-years of space. But they're barely perceptible when they reach us here on Earth. Scientists are trying to catalog these signatures of black hole mergers. Now they say they've detected 128 new signatures over a 9-month period. Why so many? Image via SXS.

“An International Team Uncovers What Powers Auroras”

The Aurora Borealis and Australis have dazzled and inspired all those who have beheld them since time immemorial. Much like the Moon, stars, constellations, and planets, they are considered a permanent part of our shared cultural heritage. These awe-inspiring displays of light are the result of charged particles from our Sun interacting with Earth's magnetic field. However, there remain unanswered questions about the mechanisms that power aurorae that scientists have been hoping to resolve for decades. For example, there's the question of what powers the electrical fields that accelerate these particles.

The Great Flood and the Brotherhood of Light

“Then came the year of the great flood of waters, though some say it was before these days, when the salt seas rose upon the East and covered the land. Men were warned beforehand by the shortening of the days of the years, and the five days

now added to the days of the year are days of sorrow for the alteration of things. It is said that seven days before the coming of the waters the sun appeared in a different quarter, but this is not easy to believe as the sun remains ever constant. The sailors of the king

certainly departed for strange places during the chaos of waters, perhaps this was because the sun had left his steady course.

“Kings came and departed to their place. They ministered unto the people according to the light revealed unto them. Most knew only the veiled Truth. but in olden times, they were better kings than in later days. There were long generations of men who walked with wisdom, and among them was the generation of the First Great Master, he who established the Brotherhood of the Chosen Ones of Light. In those days men learned the rites for coming forth by day, but the inner wisdom was not declared before them. Yet they were days of wisdom, skill and knowledge, but the knowledge of the spirit still languished, and the Sacred Secrets remained hidden. In fact, never have they been revealed to the multitude of men, for never has the multitude of men been worthy.”

-The Kolbrin Bible (MAN:34:4-5)

The Great Flood

Most of us are familiar with the story of the Great Flood through the story of Noah and the Ark found in the Bible. Most people are not aware, however, that there are similar stories of a Great Flood found in many lands and in the scriptures of many religions. The stories may be exaggerated, as modern science tells us there is no way the seas could rise to the point of covering all of the land. Yet physical evidence has been found in recent years that many areas that are now dry land were at some time underwater.

Shorter Days and Longer Year

The quote tells us that this great event involved more than a flood. It caused the days to get shorter and the year to get five days longer. Probably the only thing that could have caused all of that is a large asteroid or a small planet passing close to the Earth. Immanuel Velikovsky believed it was the planet Venus that entered our solar system from outside. He wrote about this in his 1950 book, *Worlds in Collision*. Scientists today consider his work nonsense, yet it does explain some things better than any other theories available.

Kings Administered

There were times in the past when Kings were somewhat knowledgeable in the Teachings of Light. Some were students of the great mystery schools, others had advisors who were. In either case, they administered according to God's Will, and not the whims of man or the forces of darkness.

Brotherhood of the Chosen Ones

We don't know what group the quote refers to as The Brotherhood of the Chosen Ones of Light, but we do know that such groups have existed throughout the history of man. At some times, and in some places, they operated openly and with the full knowledge of the government. In others, they had to remain secret due to the governments becoming dark and materialistic. In all cases, they were careful to teach only those who would use the knowledge wisely.

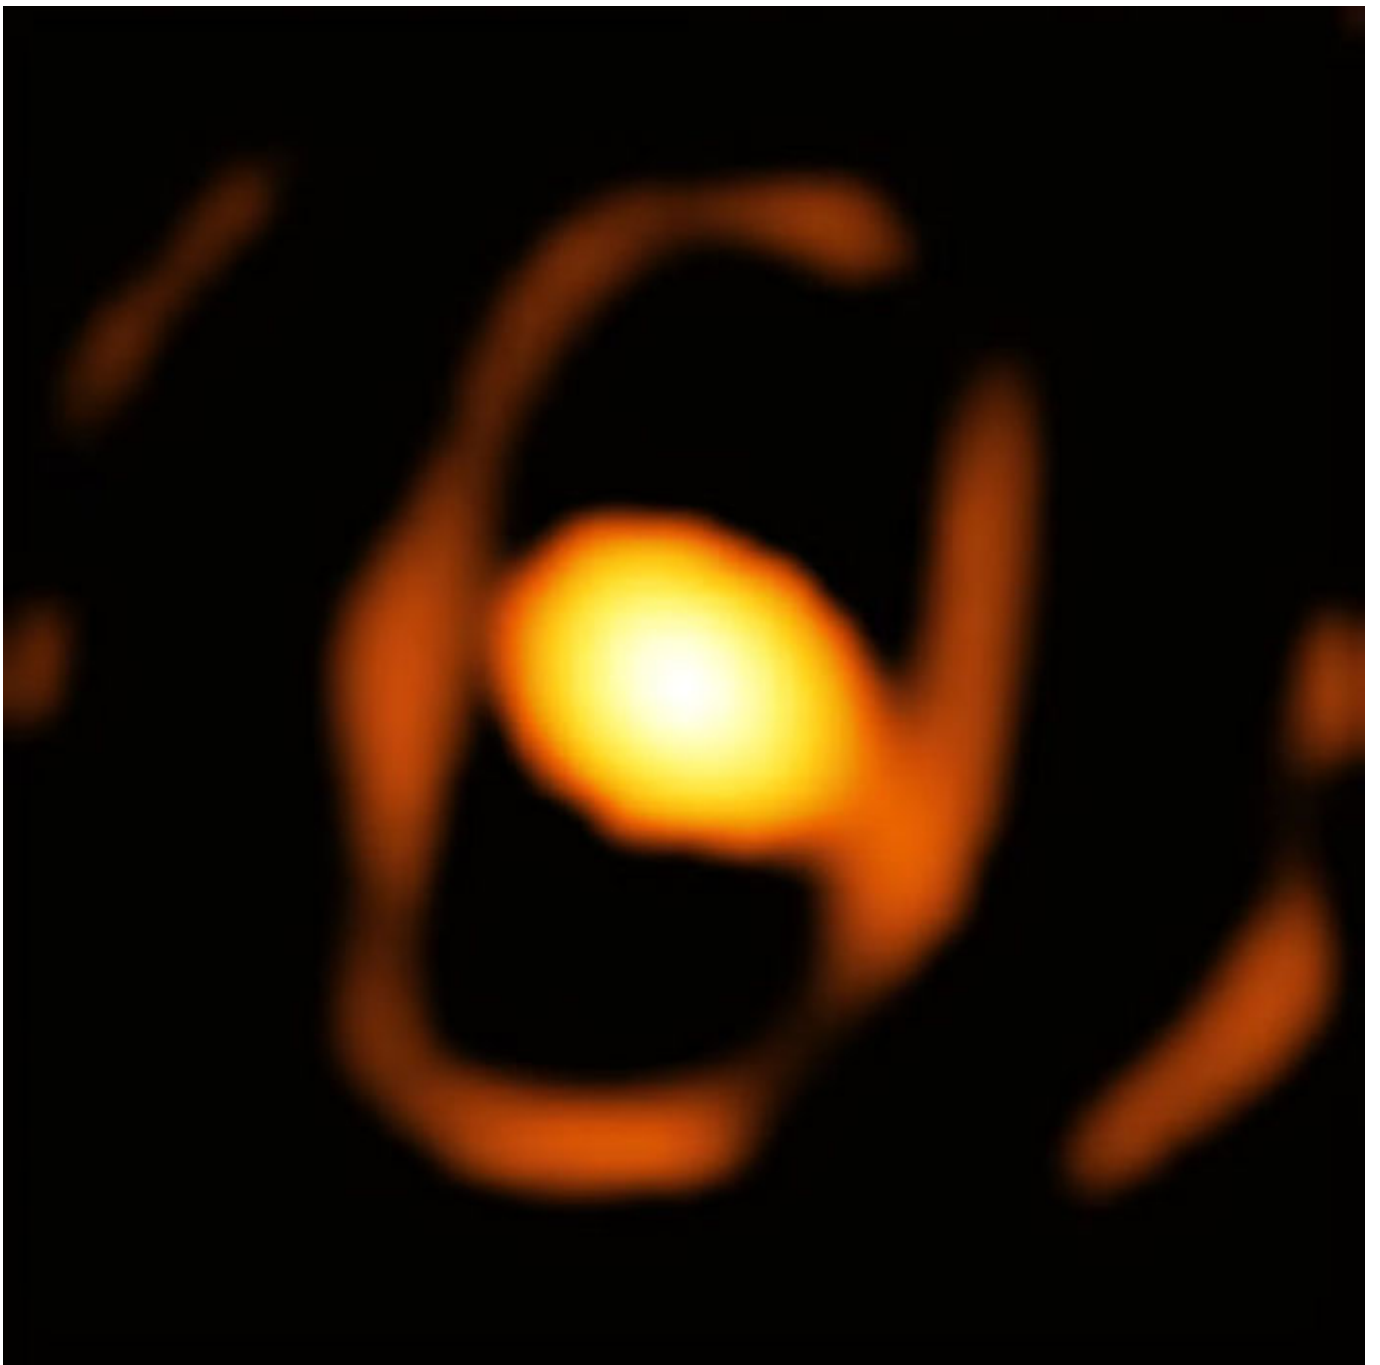

“Gravitational waves finally reveal what’s inside neutron stars”

Some of the universe’s densest objects can twist, stretch, and resonate in ways that challenge even the most seasoned physicists. Neutron stars, the remnants of massive stars that have exploded as supernovae, cram more mass than the Sun into a sphere barely 20 kilometers wide. Their gravity is billions of times stronger than Earth’s, and their internal matter behaves unlike anything we can directly observe on our planet.

**“A giant star’s sudden shift
signals it might be ready to
supernova”**

WOH G64 has always been an oddball. It sits in the Large Magellanic Cloud, a small galaxy that orbits the Milky Way, and it ranks among the most extreme red supergiants known. Earlier estimates put it at roughly 1,540 times the Sun's radius. It also sheds mass at an unusually high rate and sits inside a thick, dusty environment that partly hides what is going on.
