

“Viewing & Absorbing the Sun”

As I write this, we have just crossed the September Equinox and a number of people I know have posted about it on social media, with comments such as it being an opportune time to receive healing energies from the Sun.

I've just returned from the annual Cosolargy convocation in Reno, Nevada USA, where the Sun featured prominently in our discussions and activities. Over several consecutive mornings I joined large gatherings of members at elevated sacred places in the high desert country to partake in respectful ceremonies, as we viewed the rising of the Sun. It manifested itself slightly differently to us on each occasion and, even when a smoky haze drifted in from fires in a neighbouring state one morning, the large orange solar orb did not fail to impress us with its majesty.

“Light Mind that Awakens the Soul”

"Now you understand that the powers of light are good and the beginning and the end are unveiled to them. Whatever they do is with good judgment. For this reason they allow the enmity."

"The light mind comes and finds the soul and assumes it into wisdom. He will become for it . . . the bonds and members of the body. He will loosen the mind of the soul and release it from the bone. He will release the thought of the soul from

sinew and bind the thought of sinew in sinew. He will release insight of the soul from the vein and bind insight of sin in the vein. He will loosen the counsel of the soul and release it from the flesh and so bind the counsel of sin in the flesh."

"And the new man reigns by love, by faith, by perfection, by patience, and by wisdom. Yet his king is the light mind, who is king of all. He reigns over it as he wishes. The members' sin is imprisoned, yet the light mind is king, and an affection often rises in the body." ~[The Kephalaia](#)

Powers of Light

The phrase "powers of light" can be interpreted in two ways. It can refer to powerful beings of light who exist in higher realms of spirit and consciousness. It can also refer to the powers of light itself, both physical and spiritual.

In both cases, the powers of light are good. The beginning, the end, and everything in between is revealed to them. It is not a matter of time, although they do exist outside the limitations of time. It is that they know truth and wisdom. They know that spirit came before matter. They know that matter is a mistake. God didn't create the realm of matter. It was created by the Demiurge, or the fallen angels.

Light Mind Comes

The light mind is not the ordinary mind that is linked with, though not the same as, the brain. The light mind is the spiritual mind that operates through the soul, not the body. The Kephalaia says it "finds the soul and assumes it into wisdom". That is an interesting way to put it. What the spiritual light does is awaken the soul. We hear many people refer to a spiritual awakening these days, but few know what it really means. Many think that simply becoming aware that there is more than just the material world means they have

awakened. That is an important first step, but it isn't true awakening. Only when the soul is awakened by spiritual light, what is called in the quote the Light Mind, is one truly awakened.

“Discovering the Electric Sun – Part 1”

Is this eruption of the Sun due exclusively to a power source at the Sun's core? Or is the Sun responding to a vastly larger electrical environment? Credit: SOHO (ESA & NASA).

In the twentieth century, pioneers of plasma cosmology began to identify the crucial role of electric currents in interstellar and intergalactic space.

The "electric universe" hypothesis extends plasma cosmology into domains that were, at best, only partially touched by its pioneers. This paper will present a brief summary of the "electric Sun," a core theme of the electric universe. Additionally, we will offer pointers to the recent

interdisciplinary contributions of others toward a new understanding of electricity in space.

“Sunlight: Renewing Our Relationship with Old Sol”

The darkest hour is always just before the dawn and sometimes we wallow in the gloom of our slumbering state, only to be jolted back into life when struck by the Light. In my case it was after a long run of misfortune, a time when the light of day seemed barely perceptible, when I staggered out of my tunnel of despair and into the Sun. To some people who know me it seems odd that a pale skinned indoor type like myself could come to form such a strong bond with the Sun, but when that solar orb reaches out to you from the sky and grabs you, embraces and enchants you, then you know your life has just taken a quantum leap and there's no going back.

It's strange how so many people these days have come to be afraid of the Sun. Only two generations ago, our beaches in the summertime were jam-packed with Sun-worshippers, all competing for the best tan. Now the warnings from authorities have scared the heck out of the general population, to the point where we have a generation deficient in vitamin D. What ever happened to 'all things in moderation?' The Earth, like all the other planets in our solar system, was formed out of the Sun and we owe our very life to its warmth and light. The expression Mother Earth is often used and I like to also use the concept of our Father Sun. They really are our parents, astronomically speaking.

My initial attraction to our star came in the form of a new appreciation for brightness after a long period of emotional and mental darkness. Yet it was something more than just a metaphor. It felt like a long overdue return home. My interest was really piqued when meeting up with an old childhood friend who, I discovered, was practicing what is known as Sun gazing. The only time I had heard about this before was in reference to the ancient Egyptians, but he quickly armed me with videos and links to You Tube that demonstrated the modern-day resurgence of the practice.

Quantification

It is the general agreement between theory and observation that provides the foundation for quantification. Specialized inquiry can then test the rigor and precision of the qualitative argument with equations and numbers. In a successful test, the quantitative results will correlate well with predictions arising from the underlying theoretical assumptions; they will add logical strength and precision to the prior qualitative argument.

The concrete relationship of quantification to underlying fact has borne fruits in plasma physics, where qualitative extrapolations from laboratory findings have repeatedly anticipated observations in space and supported practical mathematical modeling.

In the case of the Sun, however, neither a qualitative nor a quantitative argument exists, since the dominant attributes of the Sun, now revealed to us in stunning detail, lie beyond the predictive ability of the theoretical assumptions. This sweeping failure of predictive ability removes the rationale for the more specialized assumptions, equations, and simulations offered in the name of solar physics today. The only way to overcome this spectacular deficiency would be to demonstrate a logical pathway of quantified analysis leading from the theoretical starting point to the major attributes of the Sun. After decades of trying, the promise of a quantified model was never fulfilled, not even in a limited sense. No direct line of reasoning from the assumed nuclear furnace to even one enigmatic attribute of the Sun can be substantiated. And so the specialized debates go on and on, guided by the dogmatic certainty that an acceptable answer must be

available. After 60 years and billions of dollars spent exploring the Sun, no peer-reviewed article has yet questioned the fusion model.

“Meeting Our Global Energy Needs”

In the absence of successful tests of a hypothesis it is a grave mistake to pretend that issues are settled. Nevertheless, with the support of popular media, a guess about the “nuclear core” of the Sun led to a leap of faith. Limitless energy should be available to humanity by controlling a fusion process—“just like the controlled fusion in the center of the sun.”

The cost of this exuberance may never be accurately calculated. Globally, governments poured billions upon billions of dollars into research, seeking to replicate the imagined events hidden inside the Sun. From the 1950s onward it was an easy sell. But the only fusion the experiments provoked lasted a second or so—typically much less than a second—and never produced as much energy as was pumped into the experiments. In physics, that’s the definition of an unworkable idea—and it’s very likely the most expensive failure of theory the world has ever witnessed. [16]

“Spiritual Dimensions of Beauty and Happiness”

“Please have mercy on us, generous ruler. The messenger of the father heals souls, draws joy in all of us, and carries away sorrow. Lofty and limitless, where darkness never comes, all the monasteries and the dwelling places are great in beauty, for they are happy in the light and know no pain. Those who enter remain forever. No blow or torture ever reaches them. The clothing they wear no one made by hand. They shine with light, and no ants crawl in them. The green wreathes on their heads never lose color. Their bodies are unfamiliar with dead weight and don’t droop. Their limbs are not paralyzed. Heavy sleep never overtakes their souls, and deceptive dreams and delusions are unknown among them. In that land hunger and anguish are not known. There is no thirst. The waters of all its lakes give out a wondrous fragrance everywhere. No one knows floods and drowning. Their walk is quicker by far than lightning. In their bodies there is no sickness. The actions of all the dark powers leave them completely alone. Fear and horror do not live in those lands, nor does destruction. The trees don’t shake down their fruit.

Decay is foreign to their fruit. Within and outdoors it is replete with brilliance, the gardens aromatic and no stray bricks or thorns. Those who ascend to those precincts and have knowledge will extol his manifestation.” ~[Parthian Songs](#)

Heals Souls

While it is not an unreasonable thing to say that the messenger of God heals souls, I think it is more accurate to say that he awakens souls. That is to say, he helps us awaken our own souls when we are ready to do so. If we are not ready, to try teaching us how would be a pointless waste of time.

The soul cannot be injured. It cannot be diseased. But it can be dormant and is when we are born into the material world. Why is uncertain, but probably because being sent spiraling down into matter is a traumatic experience. The soul is protected from too much trauma by being in a dormant state, similar to a coma when we fall to Earth.

Joy and Sorrow

The messenger does bring us joy and alleviate sorrow. Those are things of the mind, however, not the soul. By giving us hope, hope in a future world, our sorrow is relieved. By letting us glimpse the truth of the afterlife, we are given joy. Those glimpses often reach only the subconscious mind, yet that is enough to have an effect.

“Portal of the Sky Opens to the Spiritual”

“Ferry Me to the Sun Take me, firstborn. The path of light spreads before me from my own first city. I look for someone. The dissolving image of the savior comes to me. O first one, the light of the virgin touches me, the brightest picture of truth with her three angels who give grace. Firstborn, the portals of the sky fly open before me in the rays of my savior and his portrait of light. I left my garment on the earth. Senile diseases were mine. I dress in the deathless robe. Ferry me to the sun and the moon. Ferry of light at peace over three earths. Firstborn, I am a holy bride in her chamber of light, resting. I keep my victory gift. ...

"O soul, sleeping. You who sleep, you who doze, wake. Sun rises on you. ... The good man has come Jewel garland, you. Wandering sheep, your shepherd seeks you. Noble and despised, your king wants you. Where are your angelic cloths, robes that don't age? Where are your cheerful wreathes and crowns that don't fall? The clay mold of your kin, your father's seal? When you were saved, your first jewel, your mind was collected, familiar, unfailing to you. How many of your blood has the world . . . for you? The humble you have loved and the great you have humbled. You were not yet ashamed. " ~[The Manichaeon Song Book](#)

Take Me to The Sun

Why would the singer ask Christ to carry him to the sun? Is he planning to fly in a spaceship? Is he trying to get burned up by the heat of the sun? No, that's not what he wants. He wants the Christ Force within him to link him to the spiritual sun, not the physical one. It is the spiritual sun that awakens the dormant spirit and soul. The spiritual sun links the physical realm to the spiritual.

The path of light does spread before you when you turn to the spiritual sun. Part of what that sun does is show you the path. The one true path for a real spiritual awakening. There are many detours, many winding roads that can be followed forever, but only one direct path to the Light.

“Plasma forms electromagnetic structures in galaxies”

M87 radio- NRAO Very Large Array (VLA), Very Long Baseline Array (VLBA), Hubble Space Telescope (HST) – Radio montage compared to HST image showing large bubbles of energized plasma generated by a pair of opposing jets. Image courtesy of NRAO/AUI.

According to a recent press release, the Compton Gamma Ray Observatory research team found that gamma ray bursts (GRB) "...contained time-reversed light signatures...They all have this signature of brightness that fluctuates and then it turns around and goes backwards in time," said Jon Hakkila, an astrophysicist and associate dean of the Graduate School at the College of Charleston in South Carolina.

The consensus opinions among astrophysicists who study these phenomena is that they appear in one of two circumstances. Either a supermassive black hole (SMBH) pulls material into the SMBH, where it is accelerated by an intense gravity field; or, two neutron stars collide, which increases the gravitational force to such an extent that it collapses into a black hole. The extreme velocity supposedly heats up particles as they approach the speed of light. It is that excitation that is said to create X-rays and gamma-rays.

On the other hand, an electromagnetic z-pinch can squeeze plasma with such force that it rapidly compresses. Electric current flowing into the z-pinch might cause the plasma to erupt in an arc-mode discharge. We are seeing plasma structures when we look at nebulae, as well as the "remnants" of supernovae, and they behave according to the laws of electric discharges and circuits.

“Divine Science of Mathematics and Harmony”

“To Pythagoras music was one of the dependencies of the divine science of mathematics, and its harmonies were inflexibly controlled by mathematical proportions. The Pythagoreans averred that mathematics demonstrated the exact method by which the good established and maintained its universe. Number therefore preceded harmony, since it was the immutable law that governs all harmonic proportions. After discovering these harmonic ratios, Pythagoras gradually initiated disciples into this, the supreme arcanum of his Mysteries. He divided the multitudinous parts of creation into a vast number of planes or spheres, to each of which he assigned a tone, a harmonic interval, a number, a name, a color, and a form. He then proceeded to prove the accuracy of his deductions by demonstrating them upon the different planes of intelligence and substance ranging from the most abstract logical premise to the most concrete geometrical

solid. From the common agreement of these diversified methods of proof he established the indisputable existence of certain natural laws.” ~[Manly P. Hall](#)

Divine Science

Some people laugh at the idea of a divine science or spiritual science. They see science and spirituality as opposites. Either that or they think one is real and the other fantasy. Which is which varies depending on the individual.

But divine science is a real thing. It is just as real as material science. And mystery schools like that of Pythagoras didn't fantasize their teachings, they used real science to study reality and make scientific deductions based on their experiments and observations.

“Divine Child and the Awakened Soul”

“The Divine Child which was, in the hour of the mystic conversion, born in the spark of the soul, must learn like other children to walk. ...There are many eager trials, many hopes, many disappointments. At last, as it seems suddenly, the moment comes; tottering is over, the muscles have learned their lesson, ... and the new self suddenly finds itself—it knows not how—standing upright and secure. That is the moment which marks the boundary between the purgative and the illuminative states.

“The process of this passage of the ‘new’ or spiritual man from his awakening to the illuminated life, has been set out by Jacob Boehme in language which is at one poetic and precise, ‘When Christ the corner stone [ie., the divine principle latent in man] stirreth himself in the extinguished image of man in his hearty conversion and repentance,’ he says, ‘then virgin Sophia appeareth in the stirring of the Spirit of Christ in the extinguished image, in her virgins attire before the Soul; at which the soul is amazed and astonished...’” ~[Evelyn Underhill](#)

The Divine Child

There are several ways to interpret "Divine Child". It could reference Jesus. It could reference the final coming of Christ into the world of man, or it could simply represent the awakening of the Christ Consciousness within ourselves. I think it is clearly the latter in this case.

Another way to look at it is that the awakened soul is the Divine Child. It is like a child, according to Underhill, because it needs training, it needs to mature. Like a newborn, it has much to learn. Awakening (birth) is just the beginning.
