

The Sun Doctor

Dr. Rollier's main heliotherapy clinic at Leysin, Switzerland

Dr. Auguste Rollier opened the first European “Sun Clinic” in 1903 at Leysin, Switzerland. He also wrote a very influential book: Heliotherapy. And during his time, Dr. Rollier was considered the most famous heliotherapist in the world. At his peak, he operated 36 clinics.

Dr. Rollier espoused that the sun was an unsurpassed broad-spectrum medicine. He healed his patients using a wholesome diet combined with the power of the sun. By 1933, there were over 165 different diseases successfully treated with heliotherapy including tuberculosis, wounds, rickets, and much more.

Dr. Rollier's death in 1954 marked the end of sun therapy – not because it was ineffective but because it had been replaced by Big Pharma's “miracle drugs.”

“NEW VIEWS OF THE INTERSTELLAR MEDIUM – Michael Clarage”

Dr. Michael Clarage talks about his work with the SAFIRE

project at the Electric Universe during the United Kingdom International Conference & Symposium 7th – 11th July 2018, Somerset, UK. Speaking from a more philosophical perspective – what an empiricist might ponder outside the lab – he offers some intriguing if not startling observations about the universe from the perspective of the conventional astronomy (the “dead” universe) and the biological perspective (the “living” universe).

[Watch the talk by Dr. Michael Clarage on YouTube \(22:11\)](#)

Dr. Michael Clarage received his PhD in physics from Brandeis University in 1992, studying the biological and statistical behavior of proteins. Prior to that, he spent several years studying binary pulsars at the Arecibo radio telescope. He has given traveling lectures in the areas of fractional calculus, fractals, and chaotic systems as well as presented public talks on such topics as relativity and dimensions, transformation in supernova and metamorphosis in biology. Dr. Clarage is currently a scientist with the SAFIRE Project.

“Essence of Man is Spirit,

Not Matter”

“The substantial existence of the soul does not depend upon serving as Form to anything: it is an Essence which does not come into being by finding a seat in body; it exists before it becomes also the soul of some particular, for example, of a living being, whose body would be the author of its soul.

“What then is the soul’s Being? If it is neither body nor a state or experience of body, but is act and creation: if it holds much and gives much, and is an existence outside of body; of what order and character must it be? Clearly it is what we describe as Veritable Essence. The other order, the entire corporeal kind, is process: it appears and it perishes, in reality it never possesses Being, but is merely protected, in so far as it has the capacity, by participating in what authentically is.” ~Plotinus

Body and Soul

“It is clear that when Plotinus speaks of the body, he is

talking only about the physical body. It is also clear that he is lumping spirit and soul together and simply calling the whole thing “soul”. This simplified approach may miss some details, but is essentially correct.

“In Cosolargy, we say that humans have three “bodies”. The physical body of matter is one. The psychic body of thought and energy is the second. The spirit and divine soul make up the third.

Chicken or Egg

“Plotinus argues (successfully, I think) that the body cannot be the author or creator of the soul. The soul cannot be an offshoot of the body since an offshoot of something cannot be greater than the initial thing. Spirit and soul, being greater than the physical body, cannot therefore be created by the body.”

“Brilliant iron molecule could provide cheaper solar

energy”

The new molecule.

PHOTO CREDIT: Illustration by Nils Rosemann

Date: November 30, 2018

Source: Lund University

For the first time, researchers have succeeded in creating an iron molecule that can function both as a photocatalyst to produce fuel and in solar cells to produce electricity. The results indicate that the iron molecule could replace the more expensive and rarer metals used today.

“Some photocatalysts and solar cells are based on a technology that involves molecules containing metals, known as metal complexes. The task of the metal complexes in this context is to absorb solar rays and utilise their energy. The metals in these molecules pose a major problem, however, as they are rare and expensive metals, such as the noble metals ruthenium,

osmium and iridium.

“‘Our results now show that by using advanced molecule design, it is possible to replace the rare metals with iron, which is common in the Earth’s crust and therefore cheap,’ says Chemistry Professor Kenneth Wärnmark of Lund University in Sweden.”

**“Unpolluted truth and
knowledge for Spiritual
Growth”**

“If thou shalt intend that which is present, following the rule of right and reason carefully, solidly, meekly, and shalt not intermix any other businesses, but shalt study this only to preserve thy spirit unpolluted, and pure, and shall cleave unto him without either hope or fear of anything, in all things that thou shalt either do or speak countering thyself with heroical truth, thou shalt live happily; and from this, there is no man that can hinder thee.” ~Marcus Aurelius

Intend Unpolluted Truth

“Imagination is a wonderful thing. But it is also something that is often misused. We misuse it when we hide from reality by filling it with fantasies. Not just by reading books or watching movies, but by letting our view of the world around us be hid under a veil of imagination.

“Zen masters say we must empty our cup before it can be filled again. This means that we must remove those fantasies, false

beliefs, and opinions about the world and the universe that allows our imagination to hide reality from us. We don't need to empty out the truth, just the lies."

"Birkeland Currents and Our Electric Solar System | Space News"

In this series, the Thunderbolts Project has reported on the increasing frequency with which astrophysical literature acknowledges a fact which was long verboten in the space-sciences: the existence of electric currents that flow through the so-called vacuum of space. At the vastest cosmic scales, many astrophysicists recognize the “fundamentally electromagnetic structure” of the stupendous jets, hundreds of thousands of lightyears long, emanating from active galactic nuclei. At a much smaller scale, in our solar system, electric current systems are known to link the gas giants Jupiter and Saturn with their respective moons. And on our own planet, in recent years with improved technology has come ever finer evidence of tremendous electric currents that are connected to previously unknown phenomena.

Nevertheless, notions of charge neutrality and disconnected bodies in empty space continue to dominate the space sciences. In this episode, guest speaker Richard Moore explores the role of electric currents, called Birkeland currents, throughout the electric solar system.

“Crown of Knowledge and Staff of Understanding”

“Knowledge and understanding are life’s faithful companions who will never prove untrue to you. For knowledge is your

crown, and understanding your staff and when they are with you, you can possess no greater treasure.

“He who understands you is greater kin to you than your own brother. For even your own kindred my neither understand you or know your true worth.

“God has bestowed upon you intelligence and knowledge. Do not extinguish the lamp of Divine Grace and do not let the candle of wisdom die out in the darkness of lust and error. For a wise man approaches with his torch to light up the path of mankind.” ~Kahlil Gibran

Crown of Knowledge

“True knowledge is indeed the crown. The crown of achievement greater than any man-made trophy. A crown of light brighter than the brightest intellectual who still relies on theory and opinion, while the one with Divine Knowledge simply knows.”

“Stellar magnetism: What’s

behind the most brilliant lights in the sky?"

Date: *January 30, 2018*

Source: *University of Wisconsin-Madison*

Summary: *Space physicists have just released unprecedented detail on a bizarre phenomenon that powers the northern lights, solar flares and coronal mass ejections (the biggest explosions in our solar system).*

Jan Egedal, professor of physics at UW-Madison who lead an exploration of magnetic reconnection, stands beside a chamber used for experiments in that exotic phenomenon. Magnetic reconnection seems to be involved in some of the most violent explosions in the universe; the recent study was the clearest view of the magnetic reconnection ever measured in space. The results “blew my mind,” he says. Credit: David Tenenbaum/UW-Madison

“The data on so-called ‘magnetic reconnection’ came from a quartet of new spacecraft that measure radiation and magnetic fields in high Earth orbit.

“‘We’re looking at the best picture yet of magnetic reconnection in space,’ says Jan Egedal, a professor of physics and senior author of a study in Physical Review Letters. Magnetic reconnection is difficult to describe, but it can be loosely defined as the merger of magnetic fields that releases an astonishing amount of energy.

“Magnetic reconnection remains mysterious, especially since it ‘breaks the standard law’ governing charged particles, or plasma, Egedal says.”

“Love Wisdom, Truth, and Creation”

To “If a man does not walk on the path of Wisdom, he cannot have light and knowledge. If a man does not walk on the path of truth, he cannot have freedom.

Three rules for living:

- *Make Love be a way in your life.*
- *Have Wisdom be a way for knowledge and light.*
- *Let truth be a way for your freedom.*

Apply this as a foundation, and you will avoid unneeded suffering. ...If a man loves truth, it will always help him. The man who lives and loves in truth will always be helped; truth is reasonable.” ~Biensa Douno

Path of Wisdom

“The words in this quote have to be read and studies carefully. Douno doesn’t say that one has to have wisdom before he can have light and knowledge. He says only that he must be on the path of wisdom.

“If you are in any spiritual groups in social media, you probably see quite regularly posts, or answers to posts, that say there is no correct path, no right path. All paths are the same they say. The only ones who teach that are those who simply don’t know what the true path is and don’t want to admit it.”

“Seeking More Than Materialism”

“Man is not organized as a self-consistent unity. He always demands more than the world, of its own accord, gives him. Nature has endowed us with needs; among them are some that she leaves to our own activity to satisfy. Abundant as are the gifts she has bestowed upon us, still more abundant are

our desires. We seem born to be dissatisfied. And our thirst for knowledge is but a special instance of this dissatisfaction. We look twice at a tree. The first time we see its branches at rest, the second time in motion. We are not satisfied with this observation.

“The something more which we seek in things, over and above what is immediately given to us in them, splits our whole being into two parts. We become conscious of our antithesis to the world. We confront the world as independent beings. The universe appears to us in two opposite parts: I and World. We erect this barrier between ourselves and the world as soon as consciousness first dawns in us. But we never cease to feel that, in spite of all, we belong to the world, that there is a connecting link between it and us, and that we are beings within, and not without, the universe. This feeling makes us strive to bridge over this antithesis, and in this bridging lies ultimately the whole spiritual striving of mankind. The history of our spiritual life is a continuing search for the unity between ourselves and the world. Religion, art and science follow, one and all, this aim. The religious believer seeks in the revelation” ~Rudolf Steiner

Seeking More

Actually, man is fairly consistent in one thing: wanting more. Whatever he has, he wants more. Whatever he knows, he wants to know more. This is a good thing. Contented cattle may be easy to control, but they don't grow, they don't evolve. Man grows and evolves simply because he is not content with the status quo. He always looks for something better. Yet, while we have this discontent, we also want happiness and unity.

We also have to work to get things. It is our nature as well as that of the universe. Everything is moving. We must move also, we must work also. And we tend to not appreciate that which is handed to us without earning it.
