

“Biophotons: The Human Body Emits, Communicates with, and is Made from Light”

PHOTO: GreenMedInfo.com

“Increasingly, science agrees with the poetry of direct human experience: We are more than the atoms and molecules that make up our bodies; we are beings of light as well. Biophotons are emitted by the human body, can be released through mental intention, and may modulate fundamental processes within cell-to-cell communication and DNA.”
