

Religion as a Divine Communication & Healing Science

By Rev. Dr. Gary Robert Buchanan

Etymologically, the word religion comes from the Latin, “re-ligare,” to reconnect. Naturally, the question must be asked, “To what are we reconnecting?” Also implied linguistically is the idea that there must be a pre-existent *something*, a lost state of higher Consciousness, Being, Intellect, and/or Form, from which humankind has descended. In religion we refer to this *something* as a spiritual realm, i.e., “Heaven,” or the “Worlds of Light,” from whence we originated or to which we aspire. If we accept this rather universally held concept, then in order to reconnect we must follow some kind of “system” to re-establish that primordial connection, via a system of communication, or *communion*, in a logical and, yes, scientific manner.

Any meaningful science of communication requires a system based upon quantitative and qualitative, objective and subjective, observations and experiences accessible via a proven methodology that yields agreed upon results.

In my religion we teach such a system. It is called “Cosolargy,” i.e., sacred arts, sciences, and technologies designed to nurture and awaken one’s higher Consciousness, heal the physiological, psychological, and spiritual Entity, while preparing the individual to assume his/her place as a pre-existent Being of Light, a child of God. The System of Cosolargy (from *Cosmic*, *Solar*, and *Logos*) is the ultimate communication science taught for over fifty years to students around the globe by the Jamilian University¹ and Cosolargy International.²

Ancient Solar Religions

Almost all major world religions were originally “solar cultures;” and, virtually all founders of those highly advanced civilizations, e.g., in India and Asia, Egypt and Europe, South and Central America, were “solar adepts” --- inspired souls teaching their followers how to communicate with higher dimensions via the solar orb and related mystical technologies. Scientifically, and in terms of quantum physics, the third-, fourth-, and fifth-dimensional aspects of our parent sun are connected throughout Cosmos with all other sun systems, and ultimately with the “Great Central Sun,” i.e., the primal Source or Godhead. The technologies employed by the ancients had mainly to do with sun-gazing, now scientifically and medically defined as photo-syntotics.^{3 4}

Whether we are speaking of Neolithic henges and pyramids of stone scattered along ley lines around the globe, massive limestone citadels stretching for miles on Peruvian altiplanos or at Puma Punka in

Bolivia, the hundreds of solar wats and temples ranging from Southeast Asia, to India, or to the recently excavated ruins of Gobekli Tepe in Turkey (built around 10,000 B.C.E.),⁵ we recognize that all of these magnificently designed structures, cosmic machines, served *a priori* as centers of cosmic-solar religious practice and, no doubt, scientific education, as well.

Therefore, we moderns --- most of whom have lost virtually all conscious perception of the sun --- must admit to the possibility that not only did the ancients possess advanced technologies, sophisticated understandings, and higher states of Consciousness, but that their communication and holistic sciences regarding their environment, the sun, stars, and cosmos were likely superior, in many ways, to those of our own.

“The System,” this timeless process of spiritually evolving higher Consciousness and divine communications, was taught and demonstrated, for example, by Gautama Buddha, who as the returned Bodhisattva revealed his golden, crystalline form to his disciples while instructing them in eternal truths. Later in Japan, the grand master of Shingon Buddhism, Kobo Daishi Kukai (774 --- 835), similarly displayed his streaming Solar Light Body to his initiates. In ancient Israel, the Essene Messiah, Jesus/Yeshua, was transfigured on a mountaintop before Peter, James, and John. Numerous Biblical passages tell us that in that ascended state he communicated with Moses and Elijah, while those present witnessed the event --- and heard the “Voice of God,” as well.”⁶ How better could the master adept Jesus have made known his primordial Light Body and demonstrated “divine communications” with fellow Beings/Angels of Light --- and with God?

In the West, such were the sacred religious arts, sciences, and technologies taught and practiced by the early Essene Christians. For example, the Essenes of Alexandria, i.e., the “Therapeutae” (working with the Buddhist “Theravadas”), as solar adepts, were also highly regarded as physicians and healers, expert in nutrition and the benefits of organic foods in disease prevention. They practiced breathing exercises, yoga, meditation, sacred dancing, music making, sacred intonation, and specialized in methods of absorbing subtle energies. The “Essaei” also emphasized environmental harmony and essential ecological practices. As gardeners of herbs they manufactured homeopathic solutions, essences, along with energizing and *potentizing* fluids. Renowned for their knowledge in using gemstones and minerals for improving health, they further linked these practices with fasts in rhythmic cycles. They employed hands-on massage and, like Jesus, direct energetic touch --- the transferal of higher solar field energies to the recipient. Like John the Baptist of the Qumran Essene community, these adepts considered water a sacred element, e.g., in ablutions, mikvah hydrotherapies, and in the critical absorption of subtle energy in moving, “living,” waters. They

understood and taught the benefits of grounding, or “earthing,” one’s self, especially while communing with the sun. Most importantly, the Sons and Daughters of God were schooled adepts, communing with the Sun of Righteousness,⁷ while practicing heliotherapy, light and color therapies in community.

One may note that almost all of the practices mentioned above, with the exception of the solar techniques, are becoming ever more prominent in modern societies --- within the field of alternative medicine, for instance. In the United States it has been estimated that perhaps over 60% of the populace has investigated such alternative medical practices and interventions.

Of course, these early sects and their Teachings of Light were later expunged by the religious and secular authorities of that era. However, references to these groups and their advanced technologies were preserved here and there, for example, in the Dead Sea Scroll scriptures, the Nag Hammadi library, among the Gnostics and religiously “heretical” communities, in the later schools of Kabbalah, and especially in the East --- where Assyrian Christian communities migrated in the early centuries, e.g., to India, China, and Japan.⁸

As an example of this illuminated teaching being spread by Assyrian Christians, there are families in Japan who can still trace their families back to the original Keikyo “Shining Light” communities following the teachings of “Jizo” as early as 198 A.D.,⁹ if not even earlier. Historically, that “Kirisuto” presence certainly preceded the Nestorian Christian missionaries arriving centuries later. Similar to the Roman suppression of Essenic Christianity in the West, during the Shogun period in Japan the Keikyo solar communities were forced underground. However, investigation of the Shinto (“Way of the Sun”) religion reveals innumerable scientific concepts and traditional practices similar to those of the Essene-Christian “system.” Many of these scientific parallels are well documented in Nahum Stiskin’s wonderful little book, The Looking Glass God: Yin-Yang and a Cosmology for Today.¹⁰

The Modern Remnant

In fact, currently, outside of the United States, the largest enrollment of Consociates in the Jamilian University studying Cosology is taking place in Japan. Importantly, most of these students remain devoted to their ancestral religions, e.g., Buddhism, Shinto, Confucianism, and Taoism --- only now worshipping with opened “eyes” and “ears,” as it were. They now better understand the underlying principles of their familial faiths, i.e., as “religious scientists.”

Thus, in our time, Cosology is offered not only as a renewal of the original Judeo-Christian mystical tradition, but also as a method of

decoding the basic teachings of other surviving ancient solar traditions --- all of which may be investigated scientifically. Followers of Cosolargy are drawn from many world religions. In addition to those mentioned above, i.e., Buddhists Shintoists, Taoists Confucianists, students studying with J.U. come from within Judaism, Islam, Sufism, Hinduism, Brahmanism, as well as Christian sects and denominations. Complete ecumenical harmony exists between the Teachings of Cosolargy and the practices and traditions of Native Americans, Oceanians, along with numerous aboriginal cultures.

Fourth-dimensional Physics & Fifth-dimensional Paraphysics

The basic science, as now confirmed via fourth-dimensional physics,¹¹ fifth-dimensional paraphysics, and in studies of subtle energy, for example, reveals that the Entity exists on at least three dimensional planes. There is the third-dimensional physical/material body, the fourth-dimensional enveloping fields, and the fifth-dimensional Light Body potential that may be activated and set in motion.

As each lower dimension is devolved from the one above, evolution back to "Christ" or "Buddha" plane of Consciousness requires an understanding of post-Einsteinian physics --- not just metaphysics. We might equate this process with that described by the late Tielhard de Chardin as "Biogenesis" (transformation on the third-dimensional plane), to "Noogenesis" (consciousness of fourth-dimensional phenomena), to "Christogenesis" (further evolution to fifth-dimensional, "Christ" or "Buddha," Consciousness).¹²

Within the Vedic tradition we might make reference to the schools of Surya Yoga (solar techniques) and the awakening of the lower third-dimensional Nadis and Chakras linked with the meridians/bong-han ducts, mid-brain, parasympathetic network, and the endocrine system; the nurturing of the fourth-dimensional eight higher Chakras (sun wheels/auric color bodies); and, finally, reconnection with the fifth-dimensional four spheres of the Solar Light Body, i.e., Form, Intellect, Being, and Consciousness --- the "Purusha" or "Perfect Being" of the Upanishads.¹³ Among the Huna adepts of Oceania these four parts are known as the Kanaloa ("Core Self), Ku ("Subconscious Self), Lono ("Conscious Self"), and AUMakua ("High, Divine, Godly Self").

Pulse of the Universe

All existential phenomena are in motion; everything is vibratory. In religious parlance, from the original Source, the Godhead, there was/is an emanation. Within that projected Image (archetype) is

contained the Word (organizing information), the manifesting primordial creative force.

Within the devolving lower dimensional levels the Image containing the Word is conceptualized as a “wave front” projection. That is, the vibrations, the wave forms emanating from a “locus,” such as the sun, are propagating a series of radiating lines/waves — the points of which fill-in a “surface” area, which is organized in geometric archetypal patterns, creating images filled with Information Factors. Each Synergetic photon package within the wave fronts contains animating energy and information. In ancient times this wave front projection was known as the “Logos.” The Image containing the Word coming from the sun was called the “Solar Logos.”

Via proper absorption and radiation, inflection and reflection, of these Information Factors, the Entity may evolve, and survival of the species during the current “solar age” --- with its increased solar radiations, climate change, and resultant physical and psychic illnesses --- may be ensured.

Modern Scientific Studies

Contemporary researchers into the human biofield and biophotonics include Fritz-Albert Popp¹⁴ in Neuss, Germany with concepts dating back to the Russian professor Alexander Gurwitsch in the 1920s¹⁵ and further developed by Wlail Kasnatschejew in the 1960s and 1970s; Marco Bischof,¹⁶ also in Germany; Dr. Konstantin Korotkov¹⁷ and colleagues in St. Petersburg; the Russian Yuri Kravchencko and his field measurements of oscillating electrical envelopes; Roeland Van Wijk;¹⁸ Harry Oldfield via “Polycontrast Interference Photography” in England;¹⁹ and, more recently, psychotherapist Suzanne Sites Gibson, LCSW, who operates a clinical practice in Barrington, Illinois.

Wave Front BIOresonance™ and Sonather²⁰apy™

Our research into biophotonics and Wave Front BIOresonance™²¹ fields has been ongoing at Steamboat Healing Center in Nevada since 1986. Via our holistic new technology, Sonatherapy™,²² we treat conditions with combinations of sunlight/synthetic light sources, color, Cymatic sound arrays, geothermal hydrotherapy, and subtle energies. Owned and operated by Cosolargy International, the facility has compiled hundreds of case studies while working with alternative medical practitioners, such as James L. Oschman, PhD²³ and Dr. Karl Maret,²⁴ in the compilation of evermore effective physiological, psychological, and spiritually proper therapeutic protocols.

As outlined above, Sonatherapy is a combinatorial technology falling under the auspices of the Jamilian University and Cosolargy

International --- a healing approach that utilizes light, color, sound, water, and subtle energies, together, in assisted healing sessions. Further, the special acoustical sound structures are analyzed as Cymatic, or geometric, images --- archetypes used in directed guided imagery. The wave fronts created by the sounds, for example, in a small disk of water, are the natural formations/sacred geometry one may find in Pythagorean, Euclidean, and Neo-Platonic schools, as well as in Kabbalah, and within the “grand design science” of R. Buckminster Fuller, Synergetics.²⁵

The single sounds, low range and infrasonic, and/or five and six tones combined, are based upon frequencies and commutational ratios developed over the last century by the late Sir Dr. Peter Guy Manners in England, Dr. Albert Abrams, Dr. Paul Nogier, and numerous other researchers around the globe. Cymatic Therapy has become an accepted and widely used new scientific modality in medicine --- even approved by the FDA.

The Cymatic images of the sounds are applied in pulsed synchronicity with light and color, often in water, and all are analyzed as geometries in water --- since the body itself is over 70% water-based (fourth-phase vicinal).²⁶

Within the context of our “solar teachings,” the elements employed, i.e. light, color, sound, air, water, and sacred geometry are recognized in quantum field science as the more powerful, and “sacred,” elements imbued with the greatest amounts of subtle energy, e.g., for healing the body, its fields, and while nurturing one’s spiritual potentials.²⁷ Analysis in the sound laboratory of the Cymatic images is linked with the psychology of archetypes --- similar those one might view being projected from the solar orb, as appear in photisms, in dreams, as viewed in one’s higher fields by clairvoyants, and as symbols appearing within all high religious cultures on the planet for millennia.

The Cymatic wave fronts are classified and archived, compared to one another as more or less beneficial in therapies. Classifications include Cymatic arrays (with lab videos) of Sonations for arthritis, neurological conditions, bone conditions, cell regeneration and tissue repair, the aetheric field, et alia.

On our YouTube channel, “sonotherapy,” we have posted dozens of free Cymatic videos for self-healing over the last nineteen months. That site now appears to be going somewhat “viral.” From our Japanese colleagues we hear that they have been using our “Radiation Protocol” series (released after the Fukushima disaster in that country), and that some of their clients individuals have registered 50% lesser radiation readings on the Geiger counter after undergoing therapies with those “Schuman Resonance” Sonations. In all cases thyroid conditions have improved and toxicity lessened.

Sonotherapy is a new sub-division with Cosolargy's "religious arts, sciences, and technologies." Among the hundreds of clients treated with Sonotherapy over the last decade here in Nevada there have been no ill effects experienced by clients, and there have always been consistent improvements with conditions. Ultimately, we may say that this recovered scientific and religious technology is surely helping people --- and on many levels of consciousness. Sonotherapy also is a form of "communication science."

True Religion Is Science

The purpose of both religion and science is to reconnect the individual with higher states of Consciousness within which he/she may deal with and help dissipate darkness --- while also helping improve humankind's milieu. Religion without science is meaningless, and science without inspiration, and I would posit divine assistance, is problematical --- in many instances quite dangerous.
