

COSOLARGY INTERNATIONAL
THE SACRED TEACHINGS OF LIGHT

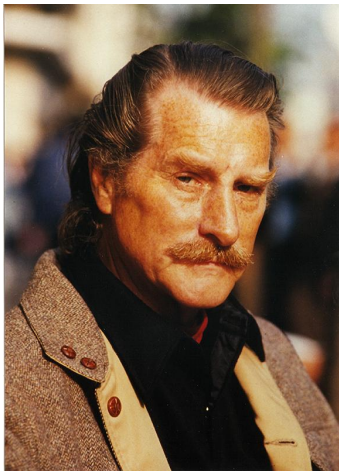

COSOLARGY NEWSLETTER August 2021

Greetings!

Welcome to our monthly bulletin with information of interest to friends of Cosolargy International. In this issue we bring you up to date with current and future events and provide a little background on our founder, the late Gene Savoy Sr, and his explorations into solar cultures, along with some uplifting words of inspiration.

If you are curious about the solar techniques and activities of our Community, contact us by using the Contact Form on the [Cosolargy International website](#). It will be forwarded to the appropriate representative for your area.

In these trying times, if you would like to have a prayer said for you or others, click the Prayer Request button at the end of this newsletter.

The Origins of Cosolargy

Quotes from Gene Savoy, Sr.

The Wonder Child would be accompanied by a luminous sun set in the firmament; indeed, the symbol of the Cakravartin is the neolithic sun-wheel; in essence, the sun. He would proclaim that the old sun, the light and life of the world, would experience a transformation. The new sun would shine healing rays upon all living things without distinction.

An Islamic legend tells of a coming "Divinely Guided One," the Mahdi, the awaited deliverer. With the advent of the Mahdi, mankind would experience, or enjoy, greater blessings than ever before. The term "Man of the Mahd" (cradle) is given reference. Another story recites that the Mahdi shall live five or seven or nine years only, and then be taken out of the world. The Mahdi, it was said, would be marked with the Seal of Prophecy.

In ancient Egypt, the principal religion was that of the Light, the Father of Illumination. It is interesting to note that in the center of the Temple of Annu was the Hall of the Altar with entrances facing east toward the rising sun and west toward the setting sun. Beyond this hall was the great Hall of the Child, depicted in his cradle. There were also other representations of the Sun Child sitting in a lotus.

The future advent of the Miraculous Babe, the boy-child endowed with fabulous attributes and marked with auspicious body signs, was also recorded in the Zoroastrian Zend-Avesta as well as in the ancient and revered Sibylline Oracles of apocalyptic imagery honored by Jews, and later by Christians. The Oracles inspired Virgil's epic fourth Eclogue, the most discussed poem in Latin literature, that treats of the Wonder Child of God to be sent as a king from the sun, at whose birth the transformation of nature and the intensification of the Golden Age—signs would begin."

From the COSOLARGY Blog

Who was Pythagoras?

Most people today would say that Pythagoras was a Greek mathematician who invented geometry and came up with a way to relate the sides of a right triangle known as the Pythagorean Theorem which says that in a triangle with right angles, the square of the hypotenuse is equal to the sum of the squares of the other two sides. This theory can also be used to calculate the area of a semicircle. He was influenced in his studies by the Greek philosopher Thales of Miletus and his student Anaximander. His students, known as Pythagoreans, were the ones who called every natural number, or whole number, which is equal to the sum of all its divisors except itself perfect numbers. The Pythagoreans also discovered irrational numbers. But that is barely scratching the surface of who Pythagoras really was. While some question that Pythagoras contributed much to the field of mathematics, he certainly contributed to Greek mathematics. In truth, however, his studies in mathematics were done only as part of his studies in spiritual development and his goal was not to create mathematicians, but to save Souls.

As a philosopher, he developed a school of philosophy known as Pythagoreanism. It included a highly structured way of life that was intended to help one develop their spiritual Self.

According to Wikipedia, Pythagoras was a philosopher who had an enormous effect on Western philosophy. They credit him with founding and operating a mystery school that practiced a “communal, ascetic lifestyle.” They add that it is debated whether he really contributed much to mathematics or even philosophy, yet state that he influenced many including Plato, Copernicus, and Isaac Newton.

A biography of Pythagoras found on the website of St. Andrews University in Scotland starts with this summary:

“Pythagoras was a Greek philosopher who made important developments in mathematics, astronomy, and the theory of music. The theorem now known as Pythagoras’s theorem was known to the Babylonians 1000 years earlier but he may have been the first to prove it.”

Travels With Cosolargy

Greece

The members of Cosolargy have traveled to various countries with the purpose of studying the spiritual knowledge of the peoples of the ancient and modern world in those places. One such trip was made to Greece in 2009. Here in pictures and words is a synopsis of that trip.

Part of the trip was a three day cruise on the ship Aegean Pearl. We visited five ports in three days.

One of the stops on the cruise was at the ruins of the ancient city of Ephesus. It was an ancient Greek city but is now in Turkey. It was built in the tenth century BC and has been designated a UNESCO World Heritage Site. This is where we first heard that Medusa could not harm people with blue eyes. Interesting as blue is associated with the spiritual.

An example of the paintings at the Knossos Palace on the island of Crete. It was built by the Minoans, an ancient civilization that was before the Greeks. The palace had an entrance that resembled a labyrinth which we know is often associated with spiritual ceremonies.

A dedication tablet found at the former location of Plato's academy which, sadly, is now a public park in Athens.

A large sun disk that is now found at the Delphi Museum. It probably once sat over the entrance to a solar temple.

We also visited the Sanctuary of Asclepius at Epidauros. Asclepius was a great healer and his center, which you could think of as an early hospital, had facilities for sports and art as well as the expected medical one. That is because Asclepius believed in developing the whole person for optimum health.

Giant rock formation in Meteora Greece. Several of them have monasteries on top.

A closer look at one of the Meteora monasteries.
