

COSOLARGY INTERNATIONAL
THE SACRED TEACHINGS OF LIGHT

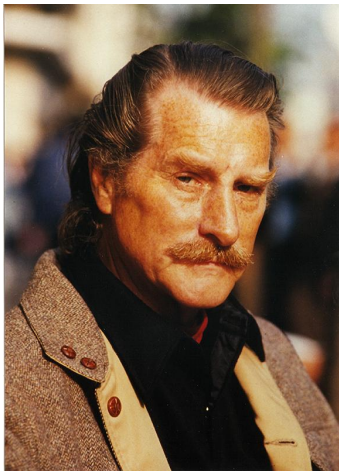

COSOLARGY NEWSLETTER November 2021

Greetings!

Welcome to our monthly bulletin with information of interest to friends of Cosolargy International. In this issue we bring you up to date with current and future events and provide a little background on our founder, the late Gene Savoy Sr, and his explorations into solar cultures, along with some uplifting words of inspiration.

If you are curious about the solar techniques and activities of our Community, contact us by using the Contact Form on the [Cosolargy International website](#). It will be forwarded to the appropriate representative for your area.

In these trying times, if you would like to have a prayer said for you or others, click the Prayer Request button at the end of this newsletter.

The Origins of Cosolargy

Quotes from Gene Savoy, Sr.

The transformation of nature and the intensification of the sun are to be the first apocalyptic signs of the dawning of a Golden Age. Malachi, God's messenger, prophesied this event with the words: "But unto you that fear my name shall the Sun of Righteousness arise with healing in its rays and ye shall go forth and grow up as calves of the stall." (Malachi 4:2)

The Mandeans, who were said to have descended from the remaining Jewish tribes in Babylonia and who traced their ancestry to John the Baptist, preserved ancient scripture that has much in common with the Essene literature recently uncovered in the Dead Sea area at Qumran. Their religion speaks of the Powers of Light and Darkness and of the two spirits of man.

Connecting With God Through Travel

In the first two articles in this series, we covered connecting with God through nature and connecting with God through art. Now we will look at travel as a way to connect with God. Of course, there is some overlap in all of these, and this one may overlap with new posts to come. You might travel to a wilderness to get close to nature or travel to a museum to study the great works of art, but I will try to keep this article all about travel without involving too much of the previous two posts.

First, we must understand that just traveling anywhere isn't likely to bring us closer to God. We can connect with God while traveling when we have the goal of doing so. We have to travel to places where the Holy Spirit remains active. Traditionalists think that God's Word is found only in Bible verses, but it is also found in all of God's creations if we look for it. As I see it, there are several subcategories of travel to consider as possibilities:

- Travel to new lands
- Travel to meet new people
- Travel to holy lands
- Travel to ancient ruins
- Travel to Space.

“The sun is getting stormier”

The next solar cycle is ramping up, offering spacecraft an unprecedented chance to unravel the sun's mysteries while giving people on Earth a stunning show.

For all we've learned about the sun, our home star remains shrouded in mystery. Now, after seven years of

relative calm, the sun is set to become more temperamental—and a fleet of sun-gazing spacecraft are ready to watch as it awakens. Those spacecraft are offering scientists an unprecedented chance to study our stormy star and the ways it can affect our cosmic

neighborhood.

Like broods of cicadas that periodically emerge and vanish, the sun cycles between periods of storm and slumber over the course of 11 years or so. These cycles are linked to the sun's internal magnetic activity, and are betrayed by telltale phenomena such as sunspots and solar flares.

Scientists keep a close eye on the sun's temperament because solar outbursts can wreak havoc on our power grids and communication systems—technologies that are vital for modern civilization—as well as any human and robotic explorers in orbit and beyond. But understanding the oft-invisible threads that tie the sun to its planetary system has been tricky.

“When I step back, as an innocent bystander, I think, How the heck can we possibly know as much as we do?” says NASA solar physicist James Klimchuk. “But there’s a tremendous amount more that we don’t understand.”

Now, the next solar cycle has ignited, with peak activity predicted around 2025. And this time, the sun will shake off its slumber while NASA's Parker Solar Probe is continuously dive-bombing the sun, swooping closer to the star than any craft has yet dared.
